

What is claimed is:

1. A flame-retardant resin composition comprising a resin composition mainly comprising a lactic acid resin, and 50 to 150 parts by mass of a surface-treated metallic hydroxide based on 100 parts by mass of said lactic acid resin.
2. The flame-retardant resin composition of claim 1 wherein said metallic hydroxide is surface-treated with a surface treating agent selected from the group consisting of higher fatty acids, silane coupling agents, titanate coupling agents, silicone compounds and synthetic resins.
3. The flame-retardant resin composition of claim 1 or 2 wherein said resin composition is a mixture of said lactic acid resin, a first aliphatic polyester other than a lactic acid resin or aromatic aliphatic polyester, said first aliphatic polyester or aromatic aliphatic polyester having a glass transition temperature T_g not exceeding 0 degrees Celsius and a crystalline melting temperature T_m of not less than 100 degrees Celsius, and a second aliphatic polyester other than a lactic acid resin or aromatic aliphatic polyester, said second aliphatic polyester or aromatic aliphatic polyester having a glass transition temperature T_g not exceeding 0 degrees Celsius and a crystalline melting temperature T_m of less than 100 degrees Celsius.
4. The flame-retardant resin composition of any of claims 1-3 further comprising a carbodiimide compound.
5. The flame-retardant resin composition of any of claims 1-4 further

comprising an inorganic filler.

6. A flame-retardant, injection-molded article formed by injection-molding the flame-retardant resin composition of any of claims 1-5.

7. The flame-retardant, injection-molded article of claim 6 which is crystallized at a temperature of from 60 to 130 degrees Celsius.
